FOR IMMEDIATE RELEASE

Icomera and Siemens Convergence Creators Announce New Partnership

September 29th 2014 – Mobile connectivity pioneers Icomera have been selected by Siemens Convergence Creators GmbH & Co.KG to provide IOB (Internet onboard) services for their rail customers. This announcement coincides with the signing of a five year framework agreement between Icomera and Siemens CVC and work has already commenced on several projects.

Speaking at the signing of the agreement, Dr. Gerald Schreiber, CEO of Siemens Convergence Creators Germany commented: “Siemens Convergence Creators always look to work with the very best specialists in each industry and Icomera, with their superior connectivity solutions, certainly satisfy our criteria. By utilising their technology we can ensure we meet not only our customers’ immediate mobile Internet connectivity needs, but also lay the foundations to support their future requirements”.

Karl-Johan Holm, President and CEO of Icomera, added: “It is a real honour for us to receive this kind of recognition from Siemens Convergence Creators given their outstanding reputation for quality and innovation in a wide range of industries. We are excited by this opportunity to take our best-in-class connectivity services to Siemens’ customer base”.

Icomera and Siemens have already showcased several early success stories from their partnership at last week’s InnoTrans trade fair, including a demonstration of Siemens’ Media4Rail application hosted on Icomera’s award-winning X6 mobile Internet connectivity and applications router.

The Media4Rail application offers rail passengers on-demand blockbuster movies and a playlist of their favourite music videos from the world’s biggest artists. Real-time information about the passengers’ next train connections and individual travel plans brings added passenger convenience and peace of mind to the offering. Together Icomera and Siemens are delivering a truly 21st century rail experience.

About Icomera:

Icomera launched the world’s first high-speed Internet solution for trains in September 2002 and is today the world’s leading provider of open Internet connectivity and application platforms for passenger transport and public safety. Its award-winning products are deployed on rail, road and sea, serving millions of Wi-Fi users every week across the globe and providing high-speed access for fleet tracking and mission-critical onboard systems.

Established in 1999, Icomera is headquartered in Sweden with offices in the United States and United Kingdom and channel partners worldwide. For more information visit www.icomera.com.

About Siemens Convergence Creators GmbH:

Headquartered in Vienna, Siemens Convergence Creators provides its customers with turnkey solutions and services in the fields of communication networks, service and customer management, public safety and security, multimedia infotainment, as well as space technology.
